Robin Grossinger is a Senior Scientist at the San Francisco Estuary Institute, where he directs SFEI’s Resilient Landscapes program. Through his twenty-plus years of work analyzing how California landscapes have changed since European contact he has utilized geographic and historical mapping to help guide landscape-scale restoration strategies. Using examples from his work he will demonstrate the mapping process and how maps can be used as an effective means of communication.

FRIDAY, MARCH 4 AT 9:30 A.M.
